

## ISO 9001:2008 and ISO 13485:2003 Certifications

### **Champaign, Illinois – June 27, 2016**

ISS just received certifications for ISO 9001:2008 and ISO 13485:2003 quality systems. The Quality Management System adopted by ISS for the design and manufacture of scientific and medical instrumentation has been audited and certified by DQS Management Systems Solutions.

ISS was certified to ISO 9001:2000 in September 2005. The new certifications bring the company in line for the manufacturing of instrumentation used for medical applications; it is also a requirement for the CE Mark for Class IIA instrumentation.

The new quality system certifications outline the commitment of ISS to provide our customers with outstanding instrumentation, be used for scientific or for clinical applications.
